

Use **P3 Industrial** for concrete that needs to be:

Waterproof

Less Permeable

More Durable

— *while also* —

Protecting your construction estimates with hard schedule installs

For instance, you'll no longer need to wait for the roof deck to dry out before applying breathable coatings and coverings.

Reduce Concrete Permeability FROM THE Inside Out

Are you a contractor that is *tired of poor results* from simple cure-and-seals that are only temporary fixes? You deserve a permanent solution that is easy to apply and lasts forever. *Spray-Lock Concrete Protection's P3 Industrial is that solution!*

Concrete is a key component for structural building members such as below-grade walls, shear walls, exposed structural slabs, and columns. Everything about concrete's life cycle and structural integrity of the design is directly related to the quality, durability, and proper curing of the concrete. Early deterioration reduced structural integrity, and burdensome maintenance costs can be concerns of the past through the use of SCP technology.

Your project's concrete design, construction, and maintenance are critical for the structure to achieve the owner's intent. P3 Industrial can help ensure those goals are realized effectively and efficiently.

Contractor Benefits FOR New AND Existing Concrete

JUST A FEW OF THE **INCREDIBLE ATTRIBUTES** OF P3 INDUSTRIAL

The most effective base-waterproofing product available

Decreasing the permeability will enhance the concrete's protection.

Single application that works with your schedule

No wait time. No need to re-mobilize just to spray a sealer. Hard schedule downstream activities.

Easy horizontal and vertical application

Spray as a cure or as a treatment for existing concrete. Open to foot traffic in one hour.

Designed to improve and protect throughout the concrete's life

Membrane products are temporary and only partially functional if applied correctly.

“ I'd buy the heck out of it! ”
